

Title:	Continuous grating machine for fruit, vegetable, coconut and other similar products
Abstract:	<p>The present invention relates to a continuous grating useful for grating of fruits, vegetables, coconut and other similar products of different geometrical shapes and hardness. Geometrical shapes so obtained by using the device of the present invention are of uniform dimension, size and are obtained in a continuous manner. Based on stationery circular multi pointed cutter and a rotating vanes/conical rotor concept, a device for grating of fruits, vegetables, coconut and other similar products, untouched by hand. As an important device, it can grate different varieties and sizes of fruits, vegetables, coconut and other similar products having different geometry and hardness.</p>
