

<b>Title:</b>	A process for the preparation of custard apple nectar
<b>Abstract:</b>	Custard apple is a delicious fruit of the tropics, with cream colored sweet pulp of pleasant flavor. The mature fruits after ripening, start dehiscing in next 2-3 days, exposed pulp turning discolored. Any processing of the pulp, by heat above 55°C results in development of off-flavor, bitterness and discoloration. The main object of the present invention is to provide a process for preparation of nectar from custard apple pulp.
