

Title:	A process for production of reduced colour cyanobacteria-Spirulina
Abstract :	<p>A process for the production of reduced colour Cyanobacteria - Spirulina which comprises,</p> <p>a) dispersing of Spirulina powder in a solution of miscible organic solvent and water in a concentration ranging from 10 to 80% for a period of 10 min to 2hr,</p> <p>b) separating the above said Spirulina biomass by centrifugation at about 6000 rpm for 15 min and</p> <p>c) drying at a temperature of 40-50°C for 1-3 hours in hot air oven to obtain reduced colour Cyanobacteria - Spirulina.</p>
