

Title: A process for preparation of ready-to-serve beverage from custard apple by microfiltration

Abstract:

The present invention provides a ready-to-serve (RTS) custard apple beverage comprising 25 to 35 % by weight of enzyme liquefied custard apple pulp together with water, sugar and citric acid to obtain final total soluble solids in the range of 14 -15°Brix and acidity in the range of 0.25 to 0.30 %, retaining its original taste and flavor and a process for the preparation of said ready-to-serve beverage from custard apple by microfiltration technique.
